child's paternal grandmother who threw them into the sea as she pronounced a charm (*ivi-atua*): "Ka oho, kangaro ki hiva!" (May it be lost in a foreign country!) Sometimes the cord was buried under stone, and a charm pronounced over it: "Ka noho hiohio koe i toou kainga!" (May you stay strong in your country!) The land in which the umbilical cord was concealed was tapu; if anyone trod upon it, his legs were covered with white spots (*kino*). Ahu Hanga-varevare, near Tahai, is one of the places where navel cords were hidden. In 1886 Easter Island natives told Thomson that the people who walked over certain rocks near Ana-hoi-hangaroa were afflicted with sore feet. Thomson (215, p. 484) remarks, "We received many solemn warnings in regard to it."

Immediately after birth the child was washed in a large calabash filled with warm water heated with hot stones. According to Knoche (121, p. 660) hot, flat stones were applied to the stomach of the mother after childbirth, to keep the waist without folds. I heard no mention of this custom and the pitiful condition of young women after several childbirths does not testify to the efficiency of this precaution. A woman who has had children is called *heipara*. The same word applies to a plant which produces young shoots.

BIRTH FEAST

A feast was celebrated on the day of the child's birth (*te topanga*). The father's family presented a gift of food to the mother's family. As at the pregnancy feast, the woman ate first or, at her suggestion, her husband started the meal. It was forbidden to cook sweet potatoes in the oven. The oven was tapu and refuse was buried carefully in the ground. Two feasts were given for the first-born child only, whose name was given by the father's brother or sister.

CHILDHOOD

A small child, until he is 6 months old, is a *pucpuc*; at 6 months he becomes a *poki-tua-huri* (child-who-can-turn). When the child was 6 or 7 months old, his father's brother cut his hair with an obsidian point (*mataa*). At the same time a brother or cousin of his mother gave him a basket containing three or five chickens. This ceremony was called *puoko varu* (hair cutting). When the child began to creep, a maternal uncle gave him a basket with fowls (*kete hakaraka*, basket of crawling). Another present was given to him when he put on his first breechcloth of tapa (*hami-haka-hune*). At 8 or 10 years of age he was tattooed on his legs. At this time his maternal uncle offered him 20 or 30 fowls called *moa o te kona* (fowls for the legs) which became tapu; they could not be eaten by the family but could be traded to a foreigner or transferred to another family, according to the rules of the *koro* (p. 346).

The child was surrounded by many tapus. His head was considered sacred

not as complete as they might be, and may tend to be weighted in that all four men were related in one way or another. However this paper, and one on trading techniques which I hope to publish at a future date, show quite clearly that advanced acculturation on the island is, for the most part, only material culture deep and has as yet penetrated only sporadically into the social organization of the people.

BIRTH

Except for a ceremony at the birth of a first child, there appears to be no regularized ritual for births as such. At the present moment an expectant mother either goes to the Naval-run hospital for delivery, or stays at home where her child is delivered with the aid of a midwife. I could learn of no pre-natal or post-parture taboos enforced on either the parents or the child. The rubbing of a fine red iron oxide powder into the baby's navel may have once had ceremonial significance but is now explained as merely an aid in the drying up of the umbilical cord.

It is apparently only the first child, especially a boy child, whose birth is fraught with a danger that must be assuaged by ceremony. Once the ceremony has been completed, however, a time for general celebration and feasting is immediately at hand.

Upon the occasion of the first birth to a married couple the father-in-law of the child's mother immediately prepares a small *umu*, i.e., a meal prepared in a pit oven, which is allowed to cook through the night. At the break of dawn on the following day the immediate families of both the child's parents open the *umu* but do not touch the inclosed food until the new mother has first partaken of it to "bring luck to her baby." After she has eaten this token meal, these relatives finish this initial *umu* and immediately begin preparations for a large *umu* feast for their friends and relatives in celebration of the birth. As with the inter-familial exchange of gifts at the time of a wedding, the respective families of the new parents each prepare their own *umu* and, upon its completion, present it to the opposite family, after which both meals are pooled for the general feasting of friends and relatives. Since such a feast may have to provide for a large portion of the population, each member of the extended family may be called upon to furnish a quantity of food in the form of chickens, eggs, *camotes* or sweet potatoes, etc. Even friends may be called upon and "if they have food beyond their needs they will give to the *umu*." Each friend or relative coming to the feast brings with him, or her, a small *umu* gift for the new mother. This usually consists of a small, wrapped bundle containing chicken or, perhaps, *camote*. It was never made

completely clear to me if these small gifts had to be cooked in a pit oven, or *umu*, or whether they were simply cooked food brought to this celebration, though I am inclined to feel that, considering the first ceremonial *umu*, they were probably especially prepared in a pit oven.

According to Jorge and Roberto, this ceremony is occasionally still performed as above but is gradually being supplanted by a modified version. This new pattern is best described by Jorge's plans for the celebration of a forthcoming first birth in the family of one of his recently married sons. Jorge explained that, upon the birth of the child, he would make a "table" of gifts for his son's father-in-law, and the father-in-law, in turn, would make a gift table for Jorge. These they would exchange at a party, and the exchanged gifts would then be distributed among the relatives of each father-in-law. The party, rather than being the traditional *umu*, would be a time when a little wine or liquor was served to the guests, and all would sing and dance during the evening. Whether or not Jorge would prepare the small *umu* for the first eating by the new mother could not be learned. Considering, however, that the Easter Islanders would feel that Chileans, and therefore all foreigners, would ridicule such a rite as superstitious, it is possible that Jorge's diffidence on the matter actually reflected a plan to carry out such a ritual, the fear of overt or covert ridicule on my part, however, forbidding his admitting it.

Although the sex of the first born does not appear to change the initial *umu* ceremony, there is ample evidence that the first born boy, whether or not he is the first child, not only stands in a special relationship to his father but to the powers of the supernatural world as well. From the day of his birth he is seen as being in a "very delicate" situation, to the extent that he is more easily subject to death than are his sisters and later born brothers. Owing to this situation he is treated in a special manner, is continually watched over, and is never allowed to go near such dangerous places as a rough beach or a high cliff. This delicate situation may continue for many years and can only be dissipated, and then completely, upon the death of one of his brothers. Thus, the death of any one of the brothers (of a first born son) liberates the earliest born forever from his close companionship with death, and he is henceforth allowed to travel at will and carries no restrictions, except where his father is concerned.

Throughout life the first born son and his father must carefully observe certain taboos in relation to one another. Neither, for example, may cut the other's hair, for to do so would bring bad luck to the one whose hair was cut. Should the father get sick, the son must not approach him, since to do this would cause the father's death. The reverse is true in the event of illness befalling the first born son. No such taboos appear to hold for the parent-sib relationship of the other children of the family. This special relationship of the father and his first born son was de-

ties from the island's administrators that its incidence in the past few years is said to have dropped noticeably.

It is in the matter of death and burial ritual that the church has shown a strong influence amounting to almost complete substitution of foreign for indigenous custom. However, the ancient feast formerly held on the day of death continues to be celebrated, along with the enforcement of certain eating taboos on the members of the deceased's family. The only influence the church has had on this celebration is to change its time to the day of burial. Whereas most of the natives are now seemingly content to have their deceased relatives go through the church ritual and be buried in the Catholic cemetery, I gathered a number of contemporary accounts of elderly men who, becoming ill, have gone to a secret cave to die. During our visit one old man became sick and disappeared from the village for almost two weeks. Since he worked for the sheep ranch, the administration attempted to find out where he had gone and what had happened to him. Considerable questioning brought forth the same answer, that the old man believed he was about to die and had probably gone to his secret cave.[8] In time he returned, well and healthy, but remained completely vague as to where he had been during his absence. As for the burial of the dead in ancient *ahus*, a secretly practiced custom in 1880,[9] I could learn nothing and, from all indications, this practice has ceased.

Beside the government's influence in lowering the incidence of divorce, it has been responsible in no small degree for a certain amount of change in the early sector of the life cycle. Thus, with the presence of a Naval-controlled hospital, doctor, and midwife, it must be presumed that much of the ancient practice surrounding the delivery of a baby, including the method of tying and severing the umbilical cord, has given way to more modern medical practices. However, it is interesting to note that the early custom of smearing red ocher into the umbilical wound continues up to the present time, along with the ceremonial *umu* given by the father's family to that of the mother, and at which time the mother must still eat the first food.[10] In this connection it should be noted that, while Métraux refers to this *umu* as a feast, my own informants seemed to regard it more as a ceremonial partaking of food.[11] That such may be the case is further strengthened by their description of an immediately following feast for friends and relatives in celebration of the first born child. The latter is not recorded by Métraux and

may constitute an innovation. However, it is so typically Rapa-nui in character, even including the interchange of food by the two families involved, that, if it is not old, it certainly represents a change from within the indigenous cultural pattern. That this feast is now breaking down and being supplanted by a European-like party is indicated by Jorge Tepano's plans for the celebration of the birth of a first child to one of his sons. However, the exchange feature continues, although gifts other than food are now beginning to be used.

Of perhaps greater significance is the change being wrought by the local government school, not only via the forced introduction of Spanish, mathematics, and the like, but, indirectly, on the life habits of the adolescent. Not only are the initiation rites of puberty no longer carried out — nor have they been for some time — but the ancient attitude that young men up to the age of marriage should devote their time to pleasurable living has undergone a noticeable modification. It is possible that in this we have an influence from Chile, in that on the continent, which natives have been allowed to visit from time to time, a boy completes his education and goes to work. Although the age for such activity in Chile may be a bit later than on Easter Island, owing to more extensive education, the fact that the island's schooling is completed for a boy at age thirteen may account for the islander's new attitude that this period marks the beginning of work for their youth.

Having noted some of the more important acculturation changes in the life cycle of the Easter Islander, we may now turn briefly to some of the correspondences with ancient custom as determined from Métraux's attempted reconstruction of the culture of the past.

Although the *umu* feast on the third or fifth month of pregnancy appears to have been dropped, the *umu* at the birth of a first child, with its rite of first food for the mother, continues.[12] Whereas the adolescent no longer goes through a puberty rite, and must now engage in a certain amount of work, his earlier freedom of sex life continues unabated. Marriage, including the gift exchange and marriage feast, continues substantially as Métraux described it for the past,[13] except for the inclusion of church ritual and an unexplained, though minor, change in the manner of exhibiting the exchanged gifts. Here Métraux describes a conical framework of poles upon which the items were exhibited, while during my stay on the island I heard numerous references to the gifts being displayed in such a way that they formed a boat.[14]

Of special interest is the continued existence of the *tuma* grouping of lineages,
